

CONTENTS

PREFACE	xvii
EDITORS AND AUTHORS	xix
Chapter 1	
1.1 Introduction to Forensic Odonto-Stomatology, and IOFOS	3
Hrvoje Brkić	
1.2 History of Forensic Odontology	6
Eddy de Valck	
1.2.1 Head on the plate (Lollia Paulina)	7
1.2.2 Charles the Bold (1477)	7
1.2.3 Paul Revere	9
1.2.4 768 years	9
1.2.5 Murder at Harvard: The Parkman-Webster case (1849)	9
1.2.6 Bite mark cases: Mrs Crémieux and “The amber imprint”	10
1.2.7 Bazar de la Charité (Paris, 4th of May 1897)	10
1.2.8 The pyjama girl case (Australia 1934)	12
1.2.9 The Torgersen case (Norway 1957)	13
1.2.10 Hitler and Eva Braun identification	14
1.2.11 More recent times	15
REFERENCES	17

Chapter 2

2.1	Practical Mortuary Procedures for Identification Cases	21
	Herman Bernitz, Teunis M. Briers	
2.1.1	Legal requirements	21
2.1.2	General etiquette in the mortuary	21
2.1.3	Requirements for the forensic dental examination of bodies requiring identification	22
2.1.4	Additional requirements for bite mark cases in a mortuary setting	23
2.1.5	Mortuary procedures for exposing teeth for identification cases	23
2.1.5.1	Technique 1: fresh corpse with rigor mortis	23
2.1.5.2	Technique 2: severely carbonised body with total mutilation of the facial features	25
2.1.5.3	Technique 3: severely carbonised corpses where the tissues are so severely burnt that any manipulation of the tissue will cause the tissues to crumble	27
2.1.5.4	Technique 4: skeletonised remains	29
2.1.6	Taking radiographs in the mortuary	29
2.1.7	The use of the Lodox scanner (LS)	30
2.1.8	Placement of the direct digital sensor or dental analogue film	30
2.1.9	Procedures to be followed after the identification process	30
	REFERENCES	31

Chapter 3

3.1	Dental Identification	35
	Thais Aparecida Xavier, Ricardo Henrique Alves da Silva	
3.1.1	Introduction	35
3.1.2	Biological and technical requirements for dental identification	36
3.1.3	Methodology for dental identification	36
3.1.3.1	Post-mortem photographic records	36
3.1.3.2	Considerations of jaw removal	37
3.1.3.3	Post-mortem dental record and examination	37
3.1.3.4	Dental radiographs	37
3.1.3.5	Evaluation of ante-mortem data	38
3.1.3.6	More useful tools used in dental identification	39
3.1.4	Dental identification cases	40
3.1.4.1	Case #1: Identity established by photographs and dental casts	40
3.1.4.2	Case #2: Insufficient evidence due to poor quality of the records	42
3.1.4.3	Case #3: Identity established by dental records and radiographs	42
3.1.5	Final considerations	44

3.2 Dental Charts	45
Cezar Capitaneanu	
3.2.1 Tooth Notation (Numbering) Systems	45
3.2.2 Zsigmondy Notation System	47
3.2.3 Palmer Notation System	47
3.2.4 Haderup Notation System	47
3.2.5 Universal Notation System	49
3.2.6 Language-adapted Notation Systems	51
3.2.7 FDI Notation System	51
3.2.8 Limitation of tooth notation systems	55
3.2.9 Charting colour indications, symbols, and abbreviations	55
3.2.10 Forensic Dental Charting (AM/PM Interpol Forms)	55
3.3 Radiology in Forensic Odontology	60
Anastasia Mitsea, Kety Karayianni, Kostas Tsiklakis	
3.3.1 Radiographic techniques	61
3.3.2 Radiation protection	66
3.3.3 General remarks	67
3.3.4 Human identification	68
3.3.5 Advantages and disadvantages of dentomaxillofacial radiology in human identification	69
3.3.6 Comparison of post-mortem and ante-mortem radiographs	71
3.3.7 Radiographic findings used for identification	73
3.3.8 Comparison methods	79
3.3.9 Human identification in mass disasters	79
3.3.10 Age estimation	81
3.3.11 Radiology in identification of abuse victims	83
3.3.12 Radiology in face reconstruction	85
3.3.13 Radiographic examination of archaeological remains	86
3.3.14 Radiology in dental malpractice cases	88
3.3.15 Radiology in virtual autopsy	89
3.3.16 Other cases where radiology is used in forensic odontology	89
3.4 Forensic Dental Photography: Practical Issues	91
Cristiana Palmela Pereira	
3.4.1 Types of forensic dental photography	91
3.4.2 Visible light and non-visible light photography	92
3.4.3 Visible light photography	92
3.4.4 Alternate light imaging (ALI)	93
3.4.5 Non-visible light photography	94
3.4.6 Reflective long-wave ultraviolet (UV) photography	94
3.4.7 Infrared (IR) photography	95
3.4.8 Standard techniques of forensic dental photography	95

3.4.9	Digital photography	96
3.4.10	Applications of photography in forensic odontology	97
3.4.11	Photographs of bite marks injuries	98
	REFERENCES	99

Chapter 4

4.1 Dental Materials in Forensic Odontology: Clinical Aspects of Materials Used in Dentistry 109

Sergio Augusto de Freitas Vincenti, Roberto Cesar Biancalana, Fernanda de Carvalho Panzeri Pires-de-Souza

4.1.1	Restorative dental materials	110
4.1.2	Direct restorative materials	110
4.1.3	Composite resin	110
4.1.4	Glass Ionomer Cementum	111
4.1.5	Amalgams	111
4.1.6	Materials used in endodontic treatment	111
4.1.7	Dental implants	112
4.1.8	Resistance of dental tissues and dental materials	112
4.1.9	Methods of analysing dental materials	115

4.2 Recognition of Dental Implants in Identification 125

John Berketa

4.2.1	Recent history of dental implants	125
4.2.2	Radiographic evaluation of dental implants	127
4.2.3	Analysis of the radiographs	128
4.2.4	Physical changes following fire, and associated analysis	130
4.2.5	Further investigations to be aware of	132
	REFERENCES	133

Chapter 5

5.1 DNA Analysis Using Dental Tissues 141

Denice Higgins

5.1.1	DNA	142
5.1.2	DNA content of teeth	143
5.1.3	Effects of post-mortem degradation on teeth	146
5.1.4	Which teeth to sample and how to sample	147
	REFERENCES	148

Chapter 6

6.1 Dental Age Estimation Based on Tooth Development 153

Patrick Thevissen, Helen Liversidge

- 6.1.1 Tooth development 153
- 6.1.2 Methods of dental age estimation 155
- 6.1.3 Types of reference data 155
- 6.1.4 Scientific value of an age estimation method 157
- 6.1.5 Additional factors for consideration: calibration, intra-, inter-observer reproducibility of age-related variable registration 160
- 6.1.6 Combining several age predictors: third molars with wrist bones and/or clavicle 161

6.2 Dental Age Assessment in Adults 163

Sigrid Kvaal

- 6.2.1 Historical background 163
- 6.2.2 Single factors 165
- 6.2.3 Combination of factors 166
- 6.2.4 Biomarkers 168
- 6.2.5 Indirect methods 169
- 6.2.6 Three-dimensional images 172
- 6.2.7 General advice 172

6.3 Dental Age Assessment in Skeletal Remains 175

Roberto Cameriere

- 6.3.1 Eleonora Gonza skeletal remains 176
- 6.3.2 Skeletal remains from the Basilica of San Domenico Maggiore 177
- 6.3.3 Neolithic skeletal remains 178
- REFERENCES 178

Chapter 7

7.1 Dental Profiling and Odontobiography 187

Marin Vodanović, Svend Richter, Ivana Savić Pavičin

- 7.1.1 Definition of dental profiling and odontobiography 187
- 7.1.2 Basics about teeth and age, sex, and race in dental profiling and odontobiography 188
- 7.1.3 Teeth and general health 189
- 7.1.4 Teeth and oral health 190
- 7.1.5 Teeth and habits 194
- 7.1.6 Teeth and profession 198
- 7.1.7 Teeth and diet 198
- 7.1.8 Teeth and ancestry 200

7.1.9	Teeth and psychological profile	203
7.1.10	Teeth and social status	203
7.2	Hereditary and Acquired Developmental Disturbances of Tooth Crowns and Roots	204
	Hrvoje Brkić, Jelena Dumančić	
7.2.1	Anomalies in the number of teeth	206
	7.2.1.1 Hypodontia	206
	7.2.1.2 Oligodontia and anodontia	206
	7.2.1.3 Hyperdontia	207
7.2.2	Anomalies in tooth size	207
	7.2.2.1 Macrodontia	207
	7.2.2.2 Microdontia	208
7.2.3	Anomalies of tooth shape	208
	7.2.3.1 Gemination (twin teeth, duplication)	208
	7.2.3.2 Fusion	208
	7.2.3.3 Concrescence	209
	7.2.3.4 Dens invaginatus	209
	7.2.3.5 Dens evaginatus	210
	7.2.3.6 Talon cusp	210
	7.2.3.7 T-shaped and Y-shaped incisors	211
	7.2.3.8 Taurodontism	211
	7.2.3.9 Enamel pearls	211
	7.2.3.10 Dilaceration	212
7.2.4	Anomalies of tooth structure	212
	7.2.4.1 Hereditary structural anomalies of the enamel	212
	7.2.4.2 Hereditary structural anomalies of the dentine	213
	7.2.4.3 Acquired structural anomalies of the enamel	213
7.2.5	Tooth colour irregularities	214
	7.2.5.1 Tetracycline discolouration	214
7.3	Teeth in Ancestry and Sex Estimation	215
	G. Richard Scott, Marin Pilloud	
7.3.1	Tooth crown and root morphology	215
	7.3.1.1 Sex estimation	215
	7.3.1.2 Ancestry estimation	216
7.3.2	Forensic applications: General patterns	225
7.3.3	rASUDAS	226
7.3.4	Sex determination of tooth size	227
7.3.5	Ancestry determination of tooth size	227
	REFERENCES	229

Chapter 8

8.1 Cheiloscopy and Rugoscopy	235
Aman Chowdhry, Priyanka Kapoor	
8.1.1 What is cheiloscopy?	235
8.1.2 What is rugoscopy?	235
8.1.3 Classification	241
8.1.3.1 Classification of lip prints	241
8.1.3.2 Classification of rugoscopy	242
8.1.4. Methodology	244
8.1.4.1 Methodology of lip print analysis	244
8.1.4.2 Methodology of rugoscopy	244
8.1.5 Application and future prospects of cheiloscopy and rugoscopy	246
REFERENCES	247

Chapter 9

9.1 Mass Disaster Victim Identification (DVI)	251
Rüdiger Lessig	
9.1.1 The organisation of the identification process	251
9.1.2 Open disasters	252
9.1.3 Closed disasters	252
9.1.4 International cooperation	253
9.1.5 DVI Team	254
9.1.5.1 Fingerprint expert	254
9.1.5.2 Forensic odontologist	255
9.1.5.3 Forensic geneticist	255
9.1.5.4 Forensic pathologist	255
9.1.5.5 Forensic anthropologist	255
9.1.6 Structures of different countries	255
9.1.7 Standards	255
9.1.7.1 Standards of forensic pathology	256
9.1.7.2 Standards of forensic odontology	257
9.1.7.3 Standards of forensic molecular biology	257
9.1.8 Radiology	258
9.1.9 Documentation and quality management	258
REFERENCES	259

Chapter 10

10.1 Bite Mark Collection and Analysis	263
Herman Bernitz, Burget A. Kloppers	
10.1.1 General aspects of bite mark analysis	264
10.1.2 Evidence collection	264
10.1.3 Preserve the evidence	265
10.1.4 Basic principles of bite mark analysis	265
10.1.4.1 Analysis methods and techniques	265
10.1.4.2 Metric analysis	266
10.1.4.3 Three-dimensional pattern association analysis	266
10.1.4.4 Warping, shrinkage, and distortion	267
10.1.5 Prevalence of specific dental features within specified populations	268
10.1.6 Practical analysis of the bite marks	268
10.1.7 Analysis of inanimate objects such as cheese, apples, or chocolate	269
10.1.7.1 Macroscopic analysis for the determination of class and individual characteristics	269
10.1.7.2 Microscopic examination of inanimate objects for the analysis of accidental characteristics	272
10.1.7.3 Inanimate bite marks and the Daubert principle	274
10.1.8 Analysis of skin bite marks	275
10.1.8.1 Test bite for skin bite marks	278
10.1.8.2 Skin bite marks and the Daubert principle	278
REFERENCES	279

Chapter 11

11.1 Human Abuse and Neglect	285
Phyllis Ho, Larry Dobrin	
11.1.1 What is abuse?	285
11.1.1.1 How and where is abuse characterised?	285
11.1.1.2 Why does it occur?	285
11.1.2 Child abuse and neglect	286
11.1.2.1 Physical abuse	286
11.1.2.2 Examining the physically abused child	288
11.1.2.3 Neglect	289
11.1.3 Responsibilities of the dental professional	289
11.1.4 Intimate partner violence (IPV)	291
11.1.5 Elder abuse	294
REFERENCES	298

Chapter 12

12.1 The Forensic Assessment of Dental and Jaw Injuries and Impairment	303
Francesco Pradella	
12.1.1 The medical history interview and the documentary collection	303
12.1.2 The physical examination	304
12.1.2.1 Supplementary documentary evidence in the forensic assessment: imaging	306
12.1.3 Forensic dental and jaw assessment in the criminal judiciary context	308
12.1.4 Forensic dental and jaw assessment in the civil judiciary context	309
REFERENCES	311

Chapter 13

13.1 The Expert-Witness	315
Yvo Vermynen	
13.1.1 Evidence	315
13.1.2 The burden of proof	316
13.1.3 Selection and appointment of the expert-witness in criminal proceedings	316
13.1.4 Civil Law countries (Napoleonic Law System – inquisitorial system) Most European Countries, South and Central America	317
13.1.4.1 Registration as an expert-witness – requirements	317
13.1.4.2 The most important duties of an expert-witness from a legal and ethical point of view	318
13.1.4.3 The oath	320
13.1.4.4 The report of the expert-witness	320
13.1.4.5 The expert-witness in court	320
13.1.4.6 The costs of a criminal investigation by the expert-witness	320
13.1.5 Common Law, an adversarial system: USA, UK, Australia, Malta, New Zealand	321
13.1.6 The chain of evidence	321
13.1.6.1 Value of the evidence	322
13.1.7 Civil and criminal liability of expert-witnesses	322
13.1.8 Confidentiality and the forensic odontologist	323
REFERENCES	324

Chapter 14

14.1 IT in Forensic Odontology	327
James McGivney, Mary A. Cimrmancic	
14.1.1 A brief history of computers in forensic dentistry	327
14.1.2 Mass fatality incident and missing person/unidentified computer programs	329
14.1.2.1 Atlas of tooth development and eruption	332
14.1.2.2 UT-age	332
14.1.2.3 DAE QuickSheets™: Derek Draft	333
14.1.2.4 Numbering	333
14.1.2.5 Algorithm	334
14.1.3 GNU Image Manipulation Program	336
14.1.4 File Formats	336
14.1.5 BMP or bitmap images	337
14.1.6 JPEG or JPG	337
14.1.7 PNG	337
14.1.8 GIF	337
14.1.9 STL	337
14.1.10 Bite marks	338
14.1.11 The mathematical description	339
14.1.12 Conclusion	339
REFERENCES	339

Chapter 15

15.1 Quality Assurance in Forensic Odontology	343
Tore Solheim	
15.1.1 Quality control in industry	343
15.1.2 Need for quality control in medicine and dentistry	343
15.1.3 Quality assurance	344
15.1.4 Minimum quality / optimum quality	346
15.1.5 Quality assurance in forensic science and pathology	346
15.1.6 Quality assurance in forensic odontology	346
15.1.7 American manual of forensic odontology and other books	346
15.1.8 Interpol	346
15.1.9 IOFOS recommendations for quality assurance	347
15.1.9.1 Quality assurance in identification of single cases	350
15.1.9.2 Quality assurance in identification after disasters	352
15.1.9.3 Quality assurance in dental age estimation	353
15.1.9.4 Quality assurance in tooth mark (bite mark) analysis and comparison	354
15.1.9.5 Quality assurance in orofacial/dental injuries	354
15.1.9.6 Quality assurance of the forensic odontology report	355

15.1.10 Recommendations to forensic odontologists	355
REFERENCES	356

Chapter 16

16.1 Forensic Facial Approximation: An Interesting Tool for Forensic Sciences 361

Julia Gabriela Dietrichkeit Pereira, Ricardo Henrique Alves da Silva

16.1.1 Bioanthropological profile and soft tissue thickness	362
16.1.2. Choosing a method for FFA	363
16.1.3 Scanning and replicating the skull	364
16.1.3.1 CT	364
16.1.3.2 3D laser scanning	364
16.1.3.3 Photogrammetry	365
16.1.3.4 Skull printed by a 3D printer machine	367
16.1.3.5 Cast model	367
16.1.4 FFA	370
16.1.4.1 Manual approximation	370
16.1.4.2 Digital approximation	373
16.1.5 Real results in forensic sciences	378
REFERENCES	379

Chapter 17

17.1 Education and Qualification in Forensic Odontology 385

Vilma Pinchi

17.1.1 History of education in forensic odontology	385
17.1.2 Forensic odontology proper field	386
17.1.3 Undergraduate education	387
17.1.4 Postgraduate education	398
17.1.5 Qualification and practise of Forensic Odontologists – IOFOS survey	391
17.1.6 Education pursued by IOFOS via recommendations on quality assurance	393
17.1.6.1 Recommendations on body identification in single corpses	395
17.1.6.2 Recommendations on body Identification in mass disasters	396
17.1.6.3 Recommendations on age estimation	399
17.1.6.4 Recommendations on dental injuries	401
17.1.6.5 The report in forensic odontology	402
17.1.6.6 Final considerations	404
REFERENCES	405
